### Overview

Throughout this comprehensive course, learners discover the essential elements of successful AI-powered user experiences. They delve into crucial topics such as user control versus automation, building trust in AI while avoiding overreliance, strategies for designing around AI errors, prototyping AI-driven designs, and mastering the art of crafting engaging social chatbots. Upon completing this course, learners will have gained lifelong knowledge that enhances their professional toolkit, enabling them to innovate in designing user experiences and advance their careers with confidence.

### Competencies / Skills

Large Language Models

Prototyping AI Designs

Generative Agents

Ethics of AI Designs

Human-AI Interaction

AI UX

### Credential / Credit Earned

**Certificate of Achievement in UI/UX Design for AI Products** verified by the Stanford Engineering Center for Global & Online Education.

**Grade: Satisfactory**      **CEU(s): 4.0**
